

Right now on internet Metaverse is the biggest thing. Metaverse is 3D virtual reality space where people can interact with each other in the form of Avatar (Virtual character). Here you can do anything that you want.

What I want to do:-

I want to create a 3D virtual space where people can interact with each other. Things that I'm focusing on:

- **Meetings in Virtual Reality:-** In this world pandemic situation most of the companies and people are doing online meeting on Video call. If you will do meeting on Virtual reality you can give more better experience of your to your clinte. For example if I want to show you a solar power plant. Right now I can show you a 2D diagram in Video calls but in Virtual world I can should you the working 3D Virtual Modal.
- **Shopping in Virtual Reality:-** It is like going to the real world shop, in a Virtual Reality your avatar (Virtual Character) enter into the Virtual 3D store. Where you can see the 3D model and read the details of a product. Not only you can see and read the details you can use it and feel the experience of the product in Virtual really. The shopping experience of the people will be increased.
- **Education in Virtual reality:-** In virtual reality students can learn by watching working models. For example, if you are attending Medical class in Virtual reality. You can't just see the 2D Diagram you can experience the 3D Virtual working Model and understand things more easily. This is how education system will be changed and everyone will understand things more properly.
- **Interaction and Privacy in Virtual reality:-** In virtual reality you can choose to me alone or to be with everyone else. When you choose to be with people you can see other people's avatars (Virtual characters). You can talk with them you can explore big Virtual world together. It's like meeting someone in park and making friends.
But when you choose to be also you will be alone in whole virtual world you can do what ever you want, you can travel to any place in the world and experience that place in virtual reality. For example I want to experience the mountains. I will simply run the mountains simulation.

There are many more thing that I have in my mind the we can do in Virtual reality. For example:- Virtual Really estate, Museums, Gaming, Virtual events like Concerts and etc. **Recently A company called TerraZero Technologies Inc has just provided the first-ever metaverse mortgage. It was used to buy virtual real estate within the metaverse.**(<https://beincrypto.com/a-metaverse-mortgages-to-buyvirtual-real-estate-just-happened/>)

The 'land' purchased was in Ethereum-based metaverse platform Decentraland.

I have developer ready to work with me on this project. That's why I am looking for small investment so I can register my start-up and create MVP. To show to the investors and approach for the big investment for the full project.

Virtual reality is next generation technology. If we wait for people to change we will be left behind. If we start the change we will be recognized as the leaders in that change.
